TIME

1. Did your estimations reflect the actual effort?
2. Was your backlog well-prioritized?
3. How did your simulated sprint align with your plan?
4. What insights did the burndown chart give about your team's capacity?

1) Yes, I used the planning poker and fibonacci numbers to appropriately assign story points based on the actual efforts.
2) Yes, I prioritized the fundamental user stories first followed by the lesser important ones
3) The plan was to complete the tasks in a week but the simulated sprint(burndown chart) shows that it will get down quicker
4) It showed that we can complete the task faster than the linear guide line(as we have just started the sprint today and completed a task)
